The transmitters **TRM2 / μ TAC200** are especially designed for the **measurement**, the **control** and the **transmission** of all the parameters of AC electrical networks: voltage, current, power, energy, frequency, etc...

◆ Programming by PC: Software SuperVISION/MCvision

Software for programming and analysis (Windows environment) allowing:

- the storage of configurations as files which can be consulted, modified, duplicated or loaded into the converters,
- the edition and printing of files with or without having a converter connected.

◆ Programming by μ Console

This miniaturised μ Console for clipping on the front face of the instruments allows:

- the visualisation of the measure,
- the visualisation and modification of the programming
- the teleloading of programming files for duplication to other converters.
